EDUCATION

University of Toronto Scarborough

Honours BSc, Computer Science – Specialist (Co-op), Software Engineering Stream

Toronto, ON

Sep. 2023 – Apr. 2028

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python, Java, C, SQL

Frameworks: React, Django, Spring Boot, TailwindCSS, Node.js

Databases & Tools: PostgreSQL, Git, Docker, JIRA, Confluence

Platforms & APIs: Linux, GitHub, Salesforce, OpenAI API

EXPERIENCE

Software Developer Intern

Toronto, ON

City of Toronto, Technology Services Division (TSD)

Sep. 2025 – Sep. 2026

- Delivered 3 production releases and resolved 75+ engineering tickets for public-facing City of Toronto Java web applications, implementing accessibility improvements, bug fixes, and feature enhancements.
- Contributed to an active digital transformation initiative, modernizing legacy Java web applications by migrating JSP-based interfaces toward a modern in-house JavaScript framework, with functional, regression, and accessibility testing.
- Identified and remediated a critical website security vulnerability as part of ongoing platform maintenance.
- Administered enterprise Salesforce instances (configuration, user and data management, release notes, documentation) and delivered Salesforce releases.

Vice President of Technology

Toronto, ON

University of Toronto Scarborough, C.R.E.A.T.E. Club

Nov. 2024 – Sep. 2025

- Built a full-stack CTF platform from scratch (React, TailwindCSS, Java) on a custom university domain, powering a 40+ student overnight competition.
- Led student contributors and owned the club's GitHub, building the event pages, registration resources, and CTF documentation the platform ran on.
- Managed technical operations during a 40+ participant overnight CTF competition, resolving live platform issues and coordinating participant support.

PROJECTS

Apache Superset Open Source Contribution | Engineering Large Software Systems

Nov. 2025 – Dec. 2025

- Implemented end-to-end query cancellation in Apache Superset (Issue #35347) for Chart and Dashboard views by integrating frontend actions with backend cancellation logic.
- Added client and query ID tracking to reliably locate and terminate active database queries (e.g., Trino) while preserving SQL Lab behavior.
- Tech Stack:** Python, JavaScript/TypeScript, React, Apache Superset, Trino

QualiD Web App | Intro to Software Engineering

Jan. 2025 – Apr. 2025

- Built a web platform from scratch for QualiD, a startup simplifying ESG reporting through centralized data and AI-powered workflows.
- Collaborated with a cross-functional team to translate client requirements into scalable architecture, maintainable backend features, and intuitive interfaces.
- Tech Stack:** Django, TailwindCSS, JavaScript, PostgreSQL, OpenAI API

AI Safety Web App "SafeOSTroll" | Hack the Valley 9

Nov. 2024

- Developed an AI safety app that detects emotional indicators in real time and surfaces calming resources or emergency support options such as campus security or 911.
- Implemented seamless voice interaction with WebRTC for continuous user-AI communication.
- Integrated HERE Maps API for location tracking and emergency routing.
- Tech Stack:** Python, Django, React, PostgreSQL

Personal Portfolio Website | Personal Project

Ongoing

- Built and deployed a React 19 portfolio website using GitHub Copilot to accelerate component development, debugging, and UI iteration while manually reviewing generated code.
- Configured automated CI/CD deployment using GitHub Pages.
- Tech Stack:** React, TailwindCSS, Vite, GitHub Pages
